Assignment: Practice checking conditions (age checker)

Instructions:

- Given a user input (age), use prompt()
- Check the user age
- Print(console.log) "Welcome, Ancient one" if their age is above 18
- Print "Welcome, young apprentice" if their age is below 18
- If done early, practice using alerts instead of printing.

A tip:
- Use number() to have the input be treated as a number
- Since we haven't covered how to link js to html just yet, copy and paste code to test it
  - Sorry don't hate me (repetition helps learning)

Submission Guidelines:

- Show it to a TA

Resources:

- Look at js resources
- Look at solution to compare your solution to mine
